

Judging Criteria

Submissions will be evaluated across several key dimensions to identify solutions that are innovative, impactful, feasible and scalable in addressing environmental challenges.

Innovation & Technical Excellence

25%

This criterion examines the originality and technical depth of the proposed solution in comparison to existing environmental approaches, with particular attention to the incorporation and effective use of AI.

Creative and novel application of AI technology to environmental issues

High level of technical design and execution, demonstrating robust implementation of chosen technologies

Meaningful advancement over current sustainability practices, showcasing how AI enhances the solution

Effective use of data, AI models and environmental monitoring tools

Environmental Impact

25%

Assesses the effectiveness of the solution in addressing major environmental challenges and its potential for positive real-world change.

Tangible ecological benefits and contribution to sustainability goals

Relevance to pressing environmental problems

Potential to reduce carbon emissions or optimize resource usage

OneEarth International Hackathon

Feasibility & Implementation

20%

Evaluates the practicality of deploying the solution, considering its technical viability and suitability within environmental context.

Technical viability and current development stage, including the readiness of AI components

Suitability for local infrastructure and environmental conditions

Resource efficiency and cost-effectiveness

Clear and realistic implementation plan

Scalability & Sustainability

15%

Focuses on the potential of the solution to expand and sustain its impact over time, including its adaptability and long-term viability.

Likelihood of adoption beyond initial deployment

Financial and operational sustainability

Long-term durability and ease of maintenance

Flexibility to adapt across various geographic and climate contexts

Presentation & Demonstration

10%

Assesses the team's ability to effectively communicate and demonstrate their solution, highlighting its features and environmental relevance.

Functional and clear demonstration of the AI technologies

Quality of user interface and visual presentation

OneEarth International Hackathon

Community Engagement & Social Impact

5%

Examines how the solution involves and benefits local communities, promoting inclusivity and knowledge sharing.

Responsiveness to community needs and input

Educational value and opportunities for knowledge sharing

Culturally sensitive and inclusive design

Added social benefits in conjunction with environmental outcomes

Evaluation Process

Each submission will be scored across all criteria by the panel of expert judges. The weighted scores will determine the winners in each category and overall winners.

Focus on demonstrating clear environmental impact while maintaining technical excellence and practical feasibility, particularly through the thoughtful application of AI.

OneEarth Hack

One Planet. One Purpose.

Join the 48-hour innovation challenge that brings together students, developers, and sustainability enthusiasts to create tech solutions for environmental and climate issues.
